Sneha Jadhav
Roll Number: 6403

Akanksha Kushwaha
Roll Number: 6402

Under the Guidance of

Shubhangi Paatil
HOD – Department of Computer Science

Department of Computer Science
Tikaram Jagannath College

Academic Year: 2026 - 27

1. Introduction

Students increasingly seek flexible income opportunities that fit academic schedules. Mainstream freelance platforms target professional freelancers and involve complex verification, portfolios, and commissions unsuitable for undergraduates. On campus, informal arrangements for tutoring, design work, and micro-tasks already occur through social media and notice boards, but these channels lack verification, ratings, transparent payments, and efficient discovery.

2. Proposed System / System Overview

2.1 Key Modules

1. **Student / Freelancer Module:** Profile and skill management, gig browsing and applications, progress tracking, and ratings.
2. **Client / Poster Module:** Gig posting, application review, freelancer selection, completion confirmation, and feedback.
3. **Admin Module:** User verification, content moderation, category management, and usage statistics.
4. **Payment and Rating Module:** Payment status tracking (or sandbox gateway) and bidirectional ratings after completion.
5. **Notification Module:** Alerts for applications, status changes, and basic messaging between parties.

2.2 Technology Stack

- **Frontend:** HTML5, CSS3, JavaScript, React.js (or Bootstrap) for responsive UI.
- **Backend:** Node.js with Express.js (or Python Flask/Django) for APIs and logic.
- **Database:** MongoDB or MySQL/PostgreSQL.
- **Authentication:** JWT with institutional email or student ID verification.
- **Tools:** Git, optional sandbox payment (Razorpay/Stripe test mode).

3. Conclusion

The Student Freelance and Micro-Gig Campus Marketplace addresses a clear need for efficient, trusted matching of student skills with short-term campus opportunities. By emphasising verification, simplicity, and reputation, it fills the gap between informal networks and professional platforms. This synopsis has presented the problem, objectives, modular design, technology choices, Agile methodology, feasibility analysis, and design plan. With careful implementation and adherence to ethical guidelines, the platform can serve as both a successful academic project and a practical tool for the student community, with clear pathways for future enhancement.
